

Installation Instructions

Installation is as easy as 1-2-3. Let's start.

- Upload all the files to your server, keeping the structure intact.
- Now change the permission on **config.inc.php** file to 666. (In some servers, you may need to try 777).
- Now, fire up your browser, and go to **admin.php**. Set the necessary variables, and test the ads using the **generate.php** file. If you are logging in for the first time, use the password '**admin**'.

That's it! You have installed the script!

Professional Installation

If you are unable to install the script, I can do it for you at a very nominal rate of \$10. Just contact me through this link:
